

Propuesta de Trabajo Fin de Máster
Año académico 2024-2025
MÁSTER EN MÉTODOS COMPUTACIONALES EN CIENCIAS

Proyecto Nº 16
Título: Development of a tool to simulate drug and response time profiles of biologics exhibiting Target Mediated Drug Disposition
Departamento/ Laboratorio: Ciencias Farmacéuticas
Director: José Ignacio Fernández de Trocóniz Fernández Correo electrónico: itroconiz@unav.es
Codirector: Correo electrónico:
Resumen: Target mediated drug disposition complicates the description of monoclonal antibodies especially in the case of multiple-ligands (i.e., bi-especifics and targeted nanoparticles). For the latter their pharmacokinetics is still nor well characterized. The objective of the current work is to develop a friendly-use (shiny R based tool) incorporating key relevant models facilitating the investigation of the impact of several conditions (target-turn-over) on the pharmacokinetics and response of this type of therapeutics.
